HONDA VEHICLE PORTFOLIO

Executive Insights & Strategic Action Plan

A stakeholder-facing synthesis of the portfolio analysis, customer-perception signals and strategic actions identified through the Power BI project.

EXECUTIVE READOUT

The portfolio is not one market. New, Used and Honda Certified vehicles occupy different commercial roles. The analysis points toward differentiated pricing, inventory and customer propositions rather than a universal portfolio strategy.	**The biggest opportunities are selective.** Honda Certified provides a strong bridge between New and Used; selected Hybrid models merit targeted expansion; ageing and information-poor vehicles require earlier intervention.	**Customer perception needs to be read with economics.** Reliability alone does not explain value perception. Age, price, experience dimensions, review popularity and information availability create different risk and opportunity profiles.

FIVE SIGNALS THAT MATTER MOST

01 Certified is the portfolio bridge

Honda Certified averages 32.60K versus 39.05K for New and 26.10K for Used, while recording the highest overall customer rating at 4.60. The evidence supports a distinct assurance-and-value role.

02 Maturity creates a combined risk

Used and Hybrid mature vehicles show simultaneous depreciation and weaker customer perception. The strategic implication is to intervene before the portfolio reaches the Mature stage rather than react after value has already deteriorated.

03 Hybrid has a perception gap

Hybrid reliability is excellent at 4.91, but customer rating is 4.51 and value-for-money is 4.40 versus 4.61 for Gasoline. The opportunity is value and experience—not a generic reliability story.

04 MPG transparency is a value signal

MPG-available vehicles score 4.70 on value-for-money versus 4.18 where MPG information is unavailable. The strongest interpretation is an association with stronger value perception, not proof of causation.

05 Popularity should inform allocation

Consumer Favorites consistently achieve the strongest customer ratings, but popularity does not translate into inventory value in the same way across New, Certified and Used. Advocacy should therefore be used as a differentiated investment signal.

EVIDENCE BEHIND THE ACTIONS

Where the portfolio signals become commercially useful

The strongest recommendations are supported by repeated patterns across condition, fuel type, vehicle age, review popularity and MPG availability.

SIGNAL	EVIDENCE FROM THE ANALYSIS	WHAT IT SUGGESTS
New / Certified / Used	New 39.05K average price; Certified 32.60K; Used 26.10K. Certified records 4.60 average customer rating, while Used has the broadest model range at 139 models.	Different commercial roles: scale, assurance/value balance, and affordability/choice.
Vehicle ageing	Used customer rating declines from 4.57 for New Models to 4.51 for Mature Models while price falls from about 34K to 17K. Hybrid customer rating reaches 4.33 in Mature Models.	Use proactive repricing, reconditioning and exit rules before maturity compounds economic and perception risk.
Hybrid vs Gasoline	Hybrid reliability 4.91 vs Gasoline 4.86, but Hybrid customer rating 4.51 vs 4.58 and value-for-money 4.40 vs 4.61. Hybrid experience is weakest in interior design and performance.	Reposition Hybrid around value and experience; expand selectively around validated winners.
MPG availability	MPG-available vehicles: 4.70 value-for-money; Not Available: 4.18. Reliability is actually higher without MPG data at 4.99, while customer rating is equal at 4.57.	Transparency appears to be an important value-perception signal; mature vehicles without MPG data warrant special attention.
Review popularity	Consumer Favorites achieve the highest customer ratings across major condition/fuel/MPG segments, but inventory value peaks differently by segment.	Use customer advocacy alongside economics and inventory exposure—not as a standalone allocation rule.

THE CORE BUSINESS NARRATIVE

Vehicles with MPG information combine broader scale, stronger value perception and a more balanced customer experience.

Vehicles without MPG information demonstrate exceptional reliability but weaker value perception and greater ageing-related customer risk.

ANALYTICAL CAUTION

The Insight Bank identifies relationships and portfolio patterns from the available dashboard data. Where the analysis compares segments, the report treats them as associations rather than causal effects. For example, the higher price of vehicles without MPG data is noted as being driven primarily by portfolio composition rather than attributed directly to MPG availability.

STRATEGIC ACTION PLAN

From portfolio signals to management action

Ten recommendations derived from the Insight Bank, consolidated into a decision-oriented executive framework.

NO.	RECOMMENDATION	EVIDENCE	MANAGEMENT ACTION
01	**Build a Three-Tier Portfolio Strategy**	New = scale and reliability; Used = affordability and choice; Certified = assurance and value balance.	Manage pricing, acquisition, inventory and customer propositions differently by condition.
02	**Scale Honda Certified Selectively**	32.60K average price sits between New and Used; customer rating is highest at 4.60.	Use Certified as the strategic bridge for customers seeking assurance without the full New premium.
03	**Introduce Mature-Vehicle Risk & Repricing**	Ageing combines depreciation with weaker customer perception, particularly in Used and Hybrid.	Set proactive pricing, reconditioning, promotion and exit thresholds before Mature-stage deterioration.
04	**Turn Used Breadth Into Curated Choice**	Used spans 139 models but has the lowest average customer rating at 4.55 and greater variability.	Rationalize weak models and establish minimum quality thresholds around proven performers.
05	**Reposition Hybrid Around Value & Experience**	Hybrid reliability is 4.91, but value-for-money is 4.40 and performance/interior design are weaker.	Improve the experience proposition and ownership-economics communication rather than selling reliability alone.
06	**Expand Winning Hybrids Selectively**	Hybrid customer ratings rise from 4.31 for Niche Models to 4.81 for Consumer Favorites.	Concentrate investment on validated models while controlling weak or ageing Hybrid exposure.
07	**Make MPG Transparency a Core Value Proposition**	Value-for-money is 4.70 with MPG information versus 4.18 without it.	Prioritize complete MPG information across listings, comparison journeys and sales communication.
08	**Prioritize Mature × MPG-Not-Available**	Customer rating falls from 4.58 New to 4.26 Mature when MPG is unavailable.	Complete missing information where possible, strengthen value communication, or accelerate repricing/exit.
09	**Use Customer Advocacy as an Investment Signal**	Consumer Favorites consistently achieve the strongest customer ratings, but inventory-value relationships differ by segment.	Combine popularity with condition, economics and exposure when allocating inventory and investment.
10	**Build a Multi-Signal Decision Engine**	Relevant signals include condition, age, fuel type, MPG, review popularity, ratings, reliability, value and inventory value.	Use combined signals to classify vehicles for Scale, Protect, Improve, Reprice or Exit decisions.

SCALE	PROTECT	IMPROVE	REPRICE	EXIT
Validated winners / selective Hybrid expansion	Strong reliability / customer advocacy	Experience / value-perception gaps	Mature / depreciating / risk segments	Weak models with poor economics or perception

MANAGEMENT TAKEAWAY

Performance → **Perception** → **Pricing** → **Inventory** → **Strategic Action.** The analysis suggests Honda can improve portfolio efficiency by moving from one-dimensional vehicle decisions toward a multi-signal framework that differentiates where to scale, protect, improve, reprice and exit.
